

What is ADSL Broadband?

Talk Internets ADSL service is second to none. We only provide this service to business users and therefore can guarantee that our service is utilised for business purposes only.

Talk Internet can provide various flavours of ADSL connections on both the 20CN and 21CN network from BT. Our internet connections are up to 20Mbps provided that the line and exchange support such speeds. With usage policies of 50GB, 100GB and unlimited ensures that your business gets the bandwidth and speed that they need at all times.

Features and Benefits

Connection to the Internet is one of life's necessities. You need to have an active internet connection to run your business effectively.

Quality - Here at Talk Internet we pride ourselves on supplying quality connections for business users. We do not supply ADSL connections to standard home users so our network remains un-contended for business traffic.

Speed - Talk Internets ADSL connections are non limited in terms of speed, they will connect as fast as the line to the business allows.

Connectivity - Talk Internets ADSL is available in various flavours, ADSL, ADSL MAX, ADSL 2+ and Annex M. All of these depend upon the current availability from BT and provide differing connection speeds dependent upon line lengths. Talk Internet will always provide the best circuit available on your line.

Static and Multiple IP's - All of Talk Internets connections come with a static IP address for ease of use. Features of these include the setting up and maintaining of VPN's. Multiple IP addresses are available upon request.

Protection – Talk Internet offer enhanced care packages for your ADSL. Enhanced care provides 24x7 reporting for faults (as opposed to 9x5) and 20 clock hours to fix (as opposed to 40 on standard care)

Free Migration – Free migration from other service providers. Talk Internet supports the industry standard MAC process for simple broadband migration.

Configuration

Simple - To utilise ADSL you require a BT phone line, a modem or router and a PC. Connection is simple from the phone line to the modem/router and then to the PC via a wired or wireless connection. Once the ADSL is installed upon your line then you can access the internet, emails and other web sites quickly, easily and instantly.

Protection - Talk Internet can additionally supply pre-configured firewalls or managed VPN solutions for your network.

NAT and No-NAT – Using multiple IP's connections can be provided as NAT or no-NAT configuration to utilise third party firewalls and VPN devices.
