

What is Dedicated Server Hosting ?

More organisations are looking to have their Web site, e-mail and other servers hosted externally. Coupled with this is the requirement for increased flexibility and scalability to cope with changing circumstances. This is where traditional hosting solutions can be inflexible and there is now a clear requirement for a new type of solution that can meet these demands.

Virtual Hosting - The Talk Internet virtual hosting platform enables your business to benefit from a hosted virtual infrastructure that is more highly available and robust than traditional hosted services. Utilising market-leading VMware technologies, it offers immediate access to the proven benefits of virtual infrastructure.

Choice - Servers can be provisioned for your business to utilise however you see fit, be it an email / exchange server or an application server utilising Citrix technologies. The options are there for every kind of server that your business requires.

Features and Benefits

Virtual hosting offers a number of distinct advantages over traditional hosting solutions. Dedicated server offerings often lead to long-term over-capacity and a lack of flexibility, whereas our virtual hosting platform enables customers to instantly add or reduce their hosted virtual infrastructure capacity.

Virtual hosting also enables customers to rely on increased flexibility and system availability that is simply not possible with traditional hosted offerings, as well as automatic data and systems protection and rapid recovery from failures. When required additional RAM and or Hard drive space can be quickly provisioned to keep in line with your businesses growth requirements. Additionally Talk Internet have a very fast and large connection to the internet ensuring that your servers are available 24 x7.

Provisioning servers off site in the hosted environment ensures that they are always available without the requirement for on site IT support.

Secure - The security of the data centre ensures that all data is backed up and kept completely secure without the need for costly on site backup solutions. The VMware platform additionally protects against hardware failures with servers being very quickly restarted on another different physical server, ensuring minimal downtime.

Configuration

Once an order to Talk Internet is provisioned then the server can be ready for use in a matter of hours.

Installation - Talk Internet can provide the OS as well as the initial installation to suit your exact requirements. You can then access the server over thin client sessions to complete any further requirements that your business has.

Management - Talk Internet additionally offer a fully managed server solution where we take complete responsibility for the applications and usage of the server. Effectively reducing your setup and maintenance costs in their entirety. Once the server is live and active then Talk Internet can make the exact changes as per your requests.

Technical Facts and Features

Cost Effective	Provision of enterprise computing power at SME pricing
High Availability	Auto restarts of failed hardware on differing physical platforms
Scalability	Easily provision more RAM or Disk space as required
Management	A full range of management options to suit your requirements
Disaster Recovery	Quick and painless recovery of servers and services

About Talk Internet

A quick glance at the market will reveal that there are many ISPs that you could be talking to - so why deal with Talk Internet? The answer is simple, flexibility. We do not believe in a "one-size fits all" approach. We customise our solutions to meet our customers' specific requirements and this approach has been at the core of our success.

Established for over 15 years, we are a UK-based operation, with our data centres and support function located in the UK. This means that if you have a problem you can quickly get through to one of our highly-trained support technicians who will help you find a resolution.
